Continuation of 3. NOTE: The inclusion of "mutually" in claim 1 requires further consideration.

Continuation of 13. Other: Applicant's argument that McLeod's device is composed of modules that are required to be mechanically interconnected is respectfully disagreed with. Paragraph 0061, for example, is extremely clear that the module on on teed to be mechanically interconnected. Paragraph 0061 states that "[e]kclusive communication channels may be provided for establishing a signal path between two devices if the devices are otherwise not connected." As noted by applicant's representations the response at page 6, "the electrical connection... may be by wire or wireless." The McLeod cannot be reasonably interpreted as requiring physical interconnectify in view of the contrary disclosure of paragraph 0061 and other sections cited in previous Office actions. See also the abstract, which states that the interconnection may be either mechanistic and/or through communication channels. Therefore, the rejections state.
